

CAMS User's Conference - June 11, 2002

Recognition of End-Users - NOAA recognizes the CAMS Pilot Offices

The CAMS Pilot at NOAA was designed to provide feedback on implementing NOAA's vision of a fully-integrated financial management system. The objectives are to demonstrate the operations and CAMS benefits earlier than full implementation, to provide lessons learned in a smaller setting with time to make changes prior to full implementation, and to provide a framework for future deployments in other NOAA Line and Staff Offices. Major accomplishments of the CAMS Pilot effort include: meeting our outlined strategy for implementing a significant segment of functionality, implementing automated funds control against BOPs, setting up budgetary resources at quarterly level for all of ORF, processing all labor data through CAMS with an interface back to FIMA, running overhead rates in CAMS, and providing training, technical assistance, and user documentation for all participants on budget execution, cost accumulation, and data warehouse.

Organizations participating in the CAMS pilot include: NOS' Center for Operational Oceanographic Programs and Office of Ocean and Coastal Resource Management; NESDIS' Headquarters' and National Climatic Data Center; and NWS' Pacific Region.

We would like to take this opportunity to recognize and thank the following key people:

1. Patricia Bass
2. Agnes Brown
3. Annette Brown
4. Janice Carmiencke
5. Chris Cartwright
6. Barbara Earland
7. Violet Foster
8. David Hendsbee
